Network Management System

Under development, specifications subject to change

Smart pi NMS is a network management system that monitors all Smart pi devices from one place, using the open AES70/OCA standard. It will manage all Smart pi products and systems.

It shows the status, alarms and health of every device at a glance, so issues are spotted and dealt with quickly, and it can send SMS and email alerts when something needs attention.

Equipment can be placed on maps for a clear graphical overview of where and how the system is connected.

Smart pi NMS is part of the Smart pi ECOsystem.

Features

- Status, alarms and health of every device at a glance
- Monitors all Smart pi devices over AES70/OCA
- Monitors properties, parameters, connections, presets and firmware versions
- Graphical overviews: place equipment on maps, with zoom, pan and edit
- Alarm management with severity levels and acknowledgement
- SMS and email alerts with customisable recipients
- Central backup and restore of device configurations
- History of changes, alarms and backups, exportable as CSV
